

LAB EXPERIMENT

ITA0506-COMPUTER VISION

P.POORNA CHANDRA-192472287

EXPNO:9

Aim:

To rotate an image in clockwise and counter-clockwise directions using Python and OpenCV.

Algorithm:

1. Import the OpenCV library.
2. Read the input image.
3. Check whether the image is loaded successfully.
4. Rotate the image 90° clockwise using cv2.rotate().
5. Rotate the image 90° counter-clockwise using cv2.rotate().
6. Display the original, clockwise, and counter-clockwise rotated images.
7. Wait for a key press and close all windows.

Code:

A screenshot of a Python IDE window titled 'EXP-9.py - C:/Users/POORNA SKHT/OneDrive/Tài liệu/computer vision ita0502/lab experime...'. The code imports cv2, reads an image named 'MICKEY.png', checks if it's loaded, rotates it 90 degrees clockwise and counter-clockwise, and displays the results. The status bar at the bottom shows 'Ln: 4 Col: 28'.

```
import cv2

# Read the image
img = cv2.imread("MICKEY.png") # Replace with your image name

if img is None:
    print("Image not found")
    exit()

# Rotate 90° Clockwise
clockwise = cv2.rotate(img, cv2.ROTATE_90_CLOCKWISE)

# Rotate 90° Counter Clockwise
counter_clockwise = cv2.rotate(img, cv2.ROTATE_90_COUNTERCLOCKWISE)

# Display images
cv2.imshow("Original Image", img)
cv2.imshow("Clockwise Rotation", clockwise)
cv2.imshow("Counter Clockwise Rotation", counter_clockwise)

cv2.waitKey(0)
cv2.destroyAllWindows()
```

OUTPUT :

RESULT: The image was successfully rotated in both clockwise and counter-clockwise directions using OpenCV
